RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 38 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2009. OCLC Number: (OCoLC)316227148 Subject: Stream measurements -- Idaho -- Statistical methods. Excerpt: . . . Approach 7 by regulations, diversions, or both. More than 50 basin The AGREE process and additional manipulation of NED characteristics were obtained for each of the 234 streamflow-DEM and NHD datasets are presented in more detail in Rea gaging stations included in the study. The basin characteristics and Skinner (2009). were obtained using GIS techniques from digital datasets A continuous parameter grid of 10 by 10 m cells was such as DEMs, precipitation grids, and land-use grids. Several established for the perennial streams map. In a continuous basin characteristics were removed from consideration after parameter grid, each cell contains the value of some parameter a review of the correlation plots of the data. Generally, if measured for the entire drainage area upstream of that two basin characteristics correlated well with each other, the cell. The flow-accumulation grid described by Jensen and characteristic least difficult to obtain was kept and the other Domingue (1988) is the most basic...
