The and 5 are read with a; a pocket steel tape graduated to feet and hundredths. In measu of a transit it is customary to tape obliquely from the bottom of the j center of the end of the horizontal axis; this does not introduce unless the distance is short. The following table gives the correctio traded from the oblique distance as measured on a transit of which l the axis is 0. 25 ft fr9m the center of the telescope: Corrections to Subtract from Oblique Measurements of H l iwn in Fig 1H is a companion instrument to the hanging hung on the same cord before or after the compass has attached to a fine fastened through ter of the arc. Owf the cord, and the r itself, it is necesdings, equidistant ose thereto as posage. If the slope a single reading will give the cor isit (Art 4), when FiR 18. Hanging Clinometer 1 angles, is operated sighting arm to its fullest extent, turning up its lc sighting hole; also open the lid about 45. Standing le body of the instrument vertically and sight through slotted arm, and through the round hole in the edge of to a light at the next station. At the same time move ig the level vial until the bubble, as seen in the mirror, cn read the vernier on the graduated end of the arm. id clinometers are just as satisfactory for underground transits. The use of...
