

PLD-Grown Thin Film Saturable Absorbers

Filesize: 6.05 MB

Reviews

It is great and fantastic. I actually have read and so i am certain that i am going to going to go through once again yet again in the future. I realized this ebook from my dad and i encouraged this book to find out.

(Dr. Kayden Gerlach)

PLD-GROWN THIN FILM SATURABLE ABSORBERS

Shaker Verlag Jul 2012, 2012. Buch. Book Condition: Neu. 21x14.8x cm. Neuware - The subject of this thesis is the preparation and characterization of thin films made of oxidic dielectrics which may find their application as saturable absorber in passively Q-switched lasers. The solely process applied for fabrication of the thin films was the pulsed laser deposition (PLD) which stands out against other processes by its flexibility considering the composition of the systems to be investigated. Within the scope of this thesis the applied saturable absorbers can be divided into two fundamentally different kinds of functional principles: On the one hand, saturable absorption can be achieved by ions embedded in a host medium. Most commonly applied bulk crystals are certain garnets like YAG ($\text{Y}_3\text{Al}_5\text{O}_{12}$) or the spinel forsterite (Mg_2SiO_4), in each case with chromium as dopant. Either of these media was investigated in terms of their behavior as PLD-grown saturable absorber. Moreover, experiments with Mg_2GeO_4 , Ca_2GeO_4 , Sc_2O_3 , and further garnets like YAG or GSGG took place. The absorption coefficients of the grown films of Cr^{4+} :YAG were determined by spectroscopic investigations to be one to two orders of magnitude higher compared to commercially available saturable absorbers. For the first time, passive Q-switching of a Nd:YAG laser at 1064 nm with Cr^{4+} :YAG thin films could be realized as well as with $\text{Cr}:\text{Sc}_2\text{O}_3$ thin films. On the other hand, the desirable effect of saturable absorption can also be generated by quantum well structures. For this purpose, several layer system like YAG/LuAG, $\text{Cu}_2\text{O}/\text{MgO}$, and $\text{ZnO}/\text{corundum}$ were investigated. It turned out that layer systems with indium oxide (In_2O_3) did not only grew in an excellent way but also showed up a behavior regarding their photo luminescence which cannot be explained by classical considerations. The observed luminescence at roughly 3 eV (410 nm) was assumed to...
