Reviews

This book will not be simple to get going on reading but extremely exciting to read through. Yes, it can be play, still an interesting and amazing literature. I am very easily could possibly get a delight of reading a written book.

(Rene Olson)

A UNIVERSAL CONSTRUCTION FOR GROUPS ACTING FREELY ON REAL TREES

Cambridge University Press. Hardcover. Book Condition: New. Hardcover. 297 pages. Dimensions: 9.0in. x 6.2in. x 0.9in. The theory of R-trees is a well-established and important area of geometric group theory and in this book the authors introduce a construction that provides a new perspective on group actions on R-trees. They construct a group $RF(G)$, equipped with an action on an R-tree, whose elements are certain functions from a compact real interval to the group G . They also study the structure of $RF(G)$, including a detailed description of centralizers of elements and an investigation of its subgroups and quotients. Any group acting freely on an R-tree embeds in $RF(G)$ for some choice of G . Much remains to be done to understand $RF(G)$, and the extensive list of open problems included in an appendix could potentially lead to new methods for investigating group actions on R-trees, particularly free actions. This book will interest all geometric group theorists and model theorists whose research involves R-trees. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Hardcover.
